Business Innovation

FincoEnergies Forward '35 - 100% green in how we think, act and invest

FincoEnergies is an independent, leading provider of sustainable energy solutions.

Our mission is to propel our customers' transition towards a better world.

At FincoEnergies we focus on providing low-carbon energy and decarbonisation solutions.

With these solutions, we empower our customers to calculate, reduce, inset and offset their emissions.

EXTENDING OUR FRONTRUNNER PORTFOLIO OF DIFFERENTIATING GLOBAL GOODBRANDS

Carbon offsetting

Sustainable (Bio)fuels

Carbon insetting

Electrified transport

Sustainable biomass

IMPACT TIMELINE GOODFUELS

2015

GoodFuels founded, focusing on Marine, Road & Rail

2017

GoodShipping enters the market

OCT/NOV 2017

Winner TEDx and Accenture Innovation Award

SEPTEMBER 2018

First blockchain bunkering with Samskip

OCTOBER 2022

Successful introduction of first physical fuel tracer

JULY 2022

First large passenger ship to sail on biofuel

2023

OCTOBER 2023

GoodFuels and Circularise digitise ISCC EU biofuels

2015

2017

SEPTEMBER 2015

First marine biofuel bunkering with Boskalis and Wärtsilä

JUNE 2017

First inland waterway pilot with HEINEKEN

2018

DECEMBER 2017

Partnership DHL Global Forwarding

2022

NOVEMBER 2018

World's first **Bio Fuel Oil** bunkering

FEBRUARY 2022

GoodFuels Expansion Asia-Pacific Singapore

JULY 2023

GoodFuels first supplier of biomethanol in The Netherlands

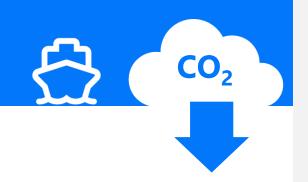

GOODFUELS PROPOSITION

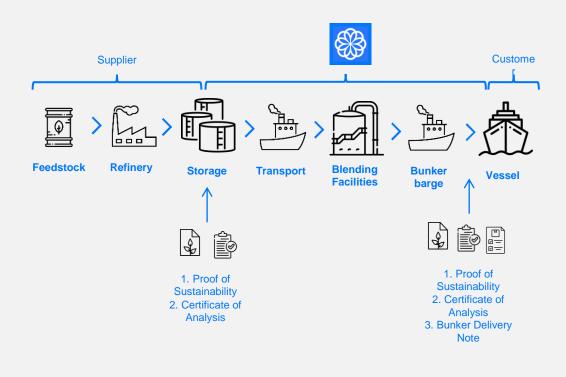

CHALLENGE

Growing demand for decarbonization in shipping.

- Regulatory
- Voluntary

CONNECTING SOLUTIONS

RESULT

Our clients have a real impact in the industry

Our clients are sustainable frontrunners

Our clients enable sustainable marine fuel development

SUSTAINABLE, 'DROP IN' BIOFUELS

Bulk Carriers and General Cargo Container vessels Tankers

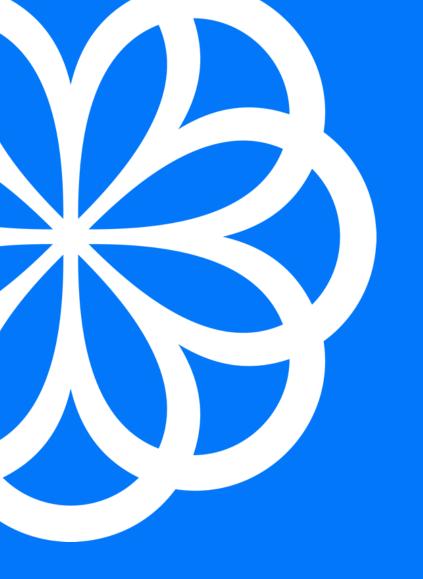

Car carriers Cruise ships Dredging and Near-shore

TAKING CLIMATE ACTION TOGETHER

DECARBONISE NOW

Our world needs climate action on all fronts everything, everywhere, all at once.

— António Guterres **Secretary General, United Nations**

SUSTAINABILITY

Our principles

Waste and residue based only
No competition with food
No direct or indirect land use change
No deforestation or biodiversity loss
No higher quality application possible
Minimum of 75% co₂ reduction
No negative social or legal impacts

ANNE MARIT POST-MELBYE Head of industry policy Miljøstiftelsen ZERO

MARTIN JUNGINGER Professor of bio-based economy

Utrecht University

PATRICIA OSSEWEIJER Professor of sustainability TU Delft

WHAT ABOUT FEEDSTOCK AVAILABILITY?

FEEDSTOCK UTILISATION FOR BIOFUEL PRODUCTION EXPECTED TO STAGNATE TOWARDS 2027

- Total production stagnating. Why?
- Sugars and starches
- Vegetable oils
- UCO, animal fat and other residue.
- Legislation drives feedstock demand per region:
 - Indonesia → CPO
 - Brazil → Soy oil
 - USA → Vegoils, UCO, animal fat
 - Europe → UCO, animal fats, wastes, residues

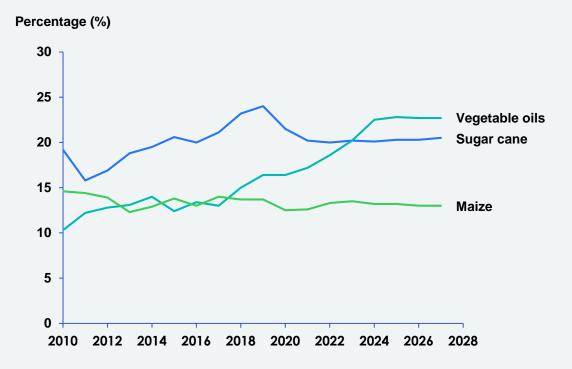

EXPLORATION OF NEW FEEDSTOCKS IS NEEDED

Biofuel demand share of global crop production

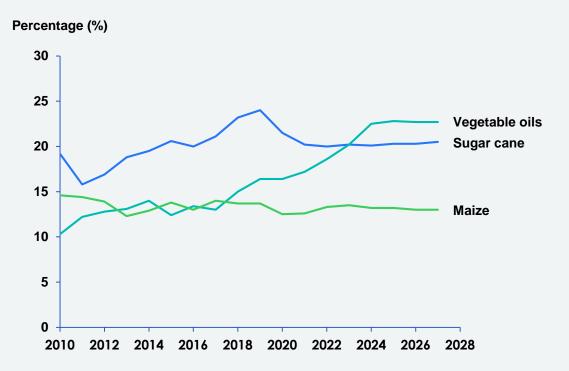

Source: IEA

WHAT FEEDSTOCKS TO USE? RED II(I) ANNEX IX A & B

What feedstocks can and should we use in Europe?

What technologies do we use for upcycling?

What feedstocks can be used by those technologies?

What is needed to use the rest of this list?

Part A. Feedstocks for the production of <u>biogas</u> for transport and <u>advanced biofuels</u>, the contribution of which towards the minimum shares referred to in the first and fourth subparagraphs of Article <u>25(1)</u> may be considered to be twice their energy content:

- (a) Algae if cultivated on land in ponds or photobioreactors;
- (b) Biomass fraction of mixed municipal <u>waste</u>, but not separated household <u>waste</u> subject to recycling targets under point (a) of Article <u>11(2)</u> of Directive <u>2008/98/EC</u>;
- (c) Biowaste as defined in point (4) of Article 3 of Directive 2008/98/EC from private households subject to separate collection as defined in point (11) of Article 3 of that Directive;
- (d) Biomass fraction of industrial <u>waste</u> not fit for use in the food or feed chain, including material from retail and wholesale and the agro-food and fish and aquaculture industry, and excluding feedstocks listed in part B of this <u>Annex</u>;
- (e) Straw;
- (f) Animal manure and sewage sludge;
- (g) Palm oil mill effluent and empty palm fruit bunches;
- (h) Tall oil pitch;
- (i) Crude glycerine;
- (j) Bagasse;
- (k) Grape marcs and wine lees;
- (I) Nut shells;
- (m) Husks;
- (n) Cobs cleaned of kernels of corn;
- (o) Biomass fraction of <u>wastes</u> and <u>residues</u> from forestry and forest-based industries, namely, bark, branches, pre-commercial thinnings, leaves, needles, tree tops, saw dust, cutter shavings, black liquor, brown liquor, fibre sludge, lignin and tall oil;
- (p) Other non-food cellulosic material;
- (q) Other <u>ligno-cellulosic material</u> except saw logs and veneer logs.

Part B. Feedstocks for the production of <u>biofuels</u> and <u>biogas</u> for transport, the contribution of which towards the minimum share established in the first subparagraph of Article <u>25(1)</u> shall be limited and may be considered to be twice their energy content:

- (a) Used cooking oil;
- (b) Animal fats classified as categories 1 and 2 in accordance with Regulation (EC) No 1069/2009.

WHAT CAN WE LEARN FROM OTHER SECTORS?

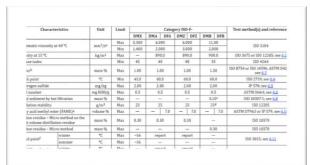

Methylene blue

Pyronarydine
